

TECHNICAL DATASHEET

36-001

FÄLGFÖRSEGLING

Description

36-001 is a revolutionary brake dust barrier which leaves an invisible, protective shield over the wheel surface, preventing the build up of stubborn road grime and dirt.

Once applied, it will last for up to four weeks, sealing and protecting the surface, making the wheels much easier to clean next time around.

36-001 is suitable for all wheel types and wheel trims.

Directions For Use:

For optimum performance wheels must be clean and dry prior to application.

1. Before use, clean wheels thoroughly using a suitable wheel cleaner.
2. Dry wheels using a microfibre cloth or chamois leather and if necessary rotate 180° and wipe again to ensure they are completely dry.
3. Shake the bottle well before use.
4. Spray liberally over the wheel, rotating to ensure that the entire surface is coated.
5. Do not rub or buff.
6. Allow to dry for 1 hour.

Drive the vehicle to aid drying if there is a chance of rain.

Note: This product produces a semi-permanent coating.

Do not be tempted to touch the coating in its wet or dry state as this will reduce durability.

After applying, if the wheels are rinsed, this will not affect product performance.

If the wheels are cleaned, then 36-001 should be re-applied.
